

Solution Requirements

Date	29 June 2026
Team ID	XXXXXX
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>Users can securely sign in using Google Sign-In or email authentication.</i>	High
2	Authorization levels	<i>Registered users can manage their profiles, receive AI recommendations, and view networking history. Administrators can manage system settings and monitor usage.</i>	High

3	External interfaces	<i>The system integrates with Google Cloud Generative AI (Gemini API) to generate personalized networking recommendations and message suggestions.</i>	High
4	Transactions processing	<i>The system processes user profile data, generates AI recommendations, and stores networking history securely.</i>	High
5	Reporting	<i>Users can view their networking recommendations, interaction history, and profile insights through a dashboard.</i>	Medium
6	Business rules, etc.	<i>Recommendations are generated based on user interests, career goals, skills, and previous networking activities. Duplicate recommendations should be minimized.</i>	High
7	Compliance to laws or regulations	<i>The system follows applicable data privacy regulations and securely stores user information with user consent.</i>	High
8	Other	<i>The system generates personalized connection requests, conversation starters, and follow-up reminders using Generative AI.</i>	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	<i>AI recommendations should be generated quickly after user input.</i>	<i>Response time less than 3 seconds for most requests.</i>
2	Scalability	<i>The system should support increasing numbers of users without significant performance degradation.</i>	<i>Supports up to 10,000 concurrent users.</i>
3	Security & Data Privacy	<i>User data must be encrypted during transmission and storage, with secure authentication.</i>	<i>HTTPS, encrypted storage, authenticated access.</i>
4	Reliability & Availability	<i>The system should remain available with minimal downtime.</i>	<i>99.9% monthly uptime.</i>
5	Usability & Accessibility	<i>The interface should be intuitive, responsive, and accessible across desktop and mobile devices.</i>	<i>Easy navigation and responsive design.</i>
6	Other	<i>The application should be maintainable, modular, and easy to update with new AI models and features.</i>	<i>Modular architecture with clear documentation.</i>
