

Technology Stack

Date	29 June 2026
Team ID	xxxxxx
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	HTML, CSS, JavaScript (or React.js)	Provides a responsive, user-friendly interface for profile management and displaying AI-powered networking recommendations.

2	Backend / Server-Side (e.g., Node.js, Python/Django, Java)	Python (Flask)	Handles user requests, communicates with the Gemini API, and processes AI-generated networking recommendations efficiently.
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	Firebase Firestore	Stores user profiles, preferences, networking history, and AI-generated recommendations securely with real-time synchronization.
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	Google Cloud Platform (GCP)	Hosts the application and integrates seamlessly with Google Cloud Generative AI services, offering scalability and reliability.
5	Version Control & CI/CD (e.g., GitHub, GitLab, Jenkins)	GitHub	Enables version control, collaboration, and project management during development.

6	Third-Party APIs / Other Tools (e.g., Stripe, Twilio, Google Maps)	Google Gemini API (Google Cloud Generative AI)	Generates personalized networking recommendations, conversation starters, follow-up messages, and career guidance using Generative AI.
