

Coding & Solution

Date	2 July 2026
Team ID	xxxxx
Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Y24AIT583/Personalized-Networking-Assistant
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	Flask, Google Gemini API
Key Features Implemented	User registration and login, profile management, AI-powered networking suggestions, personalized connection recommendations, AI-generated conversation starters, responsive user interface, Gemini API integration, session management
Pending / Incomplete Features	Event recommendation enhancement, advanced profile matching algorithm, email notifications, chat functionality, deployment optimization
Setup / Run Instructions	1. Clone or download the repository. 2. Install the required Python packages from requirements.txt. 3. Configure the Gemini API key in the application settings or environment variables. 4. Run the Flask application using python app.py. 5. Open the local server URL in a web browser to access the application.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Partially
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows a modular Flask architecture with separate templates, static assets, and backend logic. Google Gemini API is integrated to provide intelligent networking recommendations and AI-assisted conversation suggestions. The application is designed with scalability and maintainability in mind, allowing additional features to be integrated in future development phases.
